

Lab 1

Question:

- write a C++ program that asks user to enter students' quiz scores, calculate the total score for each students and average for all.

Due:

- try to submit your program today.
- officially due: 01/29/2019 12:00 pm. (before Tuesday noon)

Note:

- number of students: 1 through 5. That is, at least one student and up to 5.
- number of quizzes: 8 through 10. That is, at least 8 quizzes and up to 10.
- quiz score range: 0 through 100.
- when entering quiz scores, if user enters -1, that means the user has finished entering scores for that student.
- you may choose to calculate and display total score for each student after finishing entering all quiz scores for that student; or do so after all students scores have been entered.
- average for all: it is the average of total scores, not the average of quizzes.

Submission:

- submit your .cpp file through blackboard. We will use hanin starting from next week

Weight:

- 0.0%. However, submission is mandatory and failing to submit will be counted as one absence.
